OBJECTIVE

AI and System Engineering student seeking a Co-op position in AI/ML, Computer Vision, or NLP development. Building on my practical experience in object detection and Thai text processing, I enjoy turning complex algorithms into user-friendly applications. I am eager to contribute my technical skills and grow alongside a real-world development team.

SKILLS

- **Programming Languages:** Python, C/C++, Java, JavaScript, TypeScript
- **AI & NLP & Data Science:** Natural Language Processing (PyThaiNLP, Regular Expressions), Data Preprocessing, Computer Vision, Object Detection (YOLOv8), Predictive Modeling
- **Frontend, Cloud & Tools:** HTML, CSS, Next.js, Tailwind CSS, Streamlit, OpenCV, MQTT Protocol, Git, Vercel, JSON Server, Zod
- **Languages:** Thai, English
- **Soft Skills:** Highly organized, responsible, punctual, effective time management, and deadline-oriented.

AI PROJECTS & PRACTICAL EXPERIENCE

ChatLert: Customer Chat Normalization using NLP | Python, PyThaiNLP, Streamlit
Live Demo: https://similanna-chatlert.streamlit.app/

- Developed an 8-step NLP pipeline to normalize informal Thai customer chat text, including slang and repetitive characters, into standard Thai language.
- Implemented word tokenization, slang adjustment, and intent classification to accurately extract key customer intents and product information.
- Built and deployed an interactive web application via Streamlit to demonstrate real-time text processing, aiming to provide a seamless UX/UI and reduce admin workload.

Smart Tomato Disease Classification System | Computer Vision, Python
GitHub: https://github.com/similannaps/smart-tomato-disease-system

- Developed a machine learning system to classify tomato plant diseases using computer vision techniques.
- Prepared comprehensive technical documentation and presented findings to demonstrate the model's accuracy and practical application in agriculture.

Customer Classification Machine Learning Model | Kaggle Competition

- Participated in a competitive data science challenge to classify customer behavior.
- Conducted data preprocessing, feature engineering, and model tuning to optimize classification accuracy and achieve high-scoring submissions.

CoC QA Dashboard | HTML, CSS, JavaScript, Vercel
Live Demo: https://coc-qa-dashboard.vercel.app/

- Developed an interactive web dashboard utilizing HTML, CSS, and JavaScript to process and visualize data summaries from spreadsheet inputs.
- Deployed the application via Vercel to provide reliable online access and real-time data presentation.

Pet Database Management Web Application | Next.js, TypeScript, Tailwind CSS, Zod
GitHub: https://github.com/similannaps/pet-database

- Built a modern web application for pet data management featuring dynamic form handling and seamless REST API integration.
- Implemented robust client-side data validation using Zod and configured a mock backend with JSON Server to ensure system reliability.

EDUCATION

College of Computing, Prince of Songkla University, Phuket Campus
Bachelor of Engineering (Artificial Intelligence and System Engineering) | Expected Graduation: 2027
Student ID: 6730614003 | Cumulative GPA: 3.46
Honors: Certificate of Good Academic Performance (Academic Year 2024 - GPA 3.25+)
Relevant Coursework: Software Engineering, Data Structures and Algorithms, Machine Learning, Natural Language Processing.

Phuket Thaihua Asean Wittaya School
High School Diploma (Science-Math Program) | Graduated: 2024

CERTIFICATIONS & ACTIVITIES

- **AI Certifications:** Super AI Engineer Season 6 | 12-hour AI Learning Modules (AIClassASEAN.org) | The Hour of A.I. (Code.org)
- **University Basketball Team Player (PSU Phuket):** Balanced rigorous academic schedule with team practices and university competitions, developing strong teamwork and time-management skills.
